Influenza-like Illness ED visits in Marion County remained steady during the last week compared to the week before.

- During week 08 (February 19 to February 25), **2.39% of Marion County ED visits had ILI symptoms**. The current rate, which is the median percentage of ILI-related ED visits for week 08 over the past five years (2019-2023), is slightly higher than last week's rate of 2.29%.
- In Marion County hospitals, 0-4 years old had the highest rate (7.09%) of ILI related ED Visits. This rate is slightly higher than last week (7.04%). The median percent of 0-4 years old ILI-related ED visits for week 08 over the last five years was 6.68%.
- ED visits for Respiratory Syncytial Virus (RSV) and other respiratory illnesses for 0-4 years old increased slightly during the last week.** The percentage of RSV-related ED visits was 9.62% out of all 0-4 years old ED visits during the week 08.
 - RSV is a common respiratory virus that is the most common cause of bronchiolitis and pneumonia for children under one year of age in the U.S.

Note: ILI (Influenza-Like Illness) visit means that the patient reported fever with cough or sore throat or used the word "flu" or "influenza" to describe either their symptoms or their reason for the ED (Emergency Department) visit.

- Indiana is experiencing **Minimal** ILI activity. For week 07, IDOH reported 1.77% ILI at sentinel provider sites and 1.79% ILI at ED and urgent care visits. Syndromic percent ILI decreased, and Sentinel percent ILI increased slightly during the last week.
- There have been **176 influenza-associated deaths** this season, **zero** Influenza-associated deaths were detected for the week 07.
- Ten specimens were tested at the IDOH Laboratory during Week 07. All were detected as Influenza negative.

National (Week 07, February 12, 2023- February 18, 2023)

<https://www.cdc.gov/flu/weekly/index.htm>

- Seasonal Influenza activity is **low** across the US.
- Of outpatient visits to a healthcare provider, **2.6% were ILI-related**, as reported through the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet). This rate is the same as last week's rate and higher than the national baseline of 2.5%.
- **Four Influenza-associated pediatric deaths were reported to CDC** during week 07. All four deaths were associated with influenza A viruses. The total number of pediatric deaths occurring during the 2022-2023 season reported to CDC was 115.
- During Week 07, **1.0% of clinical laboratory specimens** were **positive for influenza**. This rate is lower than last week (1.4%).
- During Week 07, **135 (1.4%) specimens** were **positive at public health laboratories**. This rate is lower than last week (1.7%).
- The CDC maintains its recommendation that all individuals aged 6 months and older receive an annual flu vaccine for as long as flu activity persists.

Note: ILI (Influenza-Like Illness) visit means that the patient reported fever with cough or sore throat or used the word "flu" or "influenza" to describe either their symptoms or their reason for the ED (Emergency Department) visit.
