Updates on Most Recent Local Activity: Week 15 (Apr 08 – Apr 14)

- Visits with Influenza-like Illness (ILI) symptoms continue to decline in Marion County Emergency Departments, and they made up only 0.89% of visits for Week 15. This percent is similar to what we see when we are not in the influenza season.
- There have been 24 influenza-associated deaths for Marion County residents this flu season.
- In Marion County hospitals' ED population, ILI was most common in the 0-4 age group. Among ED visits by 0-4 year olds, 2.25% were for ILI. ILI among ED visits by 5-17 year olds was next highest, at 1.53%.

Percent of ILI related ED Visits

Percent of ILI related ED Visits by Age Group

Note: ILI (Influenza-Like Illness) visit means that the patient reported fever with cough or sore throat, or used the word "flu" or "influenza" to describe either their symptoms or their reason for the ED (Emergency Department) visit.

Influenza Situation Report

2017-2018 Seasonal Influenza Week 14

(April 01 – April 07, 2018)

Local (Week 14)

- The percentage of ILI related ED visits was 1.04%.
- Children age 0-4 had the highest age-specific percent ILI (2.41%).

Indiana (Week 14)

<https://www.in.gov/isdh/files/Weekly%20Influenza%20Report-Week%2013-2017-2018.pdf>

- Indiana is experiencing local and low ILI activity. For Week 14, ISDH reports 2.42% ILI at sentinel provider sites and 1.81% ILI ED visits. This is a decrease for both sentinel sites and EDs.
- The total number of mortalities in Indiana this flu season is 312.
- Week 14 results for samples tested at the state lab: 7 specimens tested positive for Influenza A/H3 seasonal virus, 2 specimens tested positive for A/H1N1pdm virus, 4 specimens tested positive for Influenza B seasonal virus (Yamagata or Victoria), and 1 specimen tested positive for Influenza B with genotype pending.

National (Week 14)

<https://www.cdc.gov/flu/weekly/index.htm>

- During Week 14, influenza activity decreased in the United States, and the majority states were reporting minimal and regional influenza activity. In addition, during Week 14, 2.1% of outpatient visits reported through the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet) were due to ILI. This was lower than Week 13 (2.2%).
- 142 influenza-associated pediatric deaths have been reported to CDC this flu season.
- The percent of respiratory specimens testing positive for influenza in clinical laboratories decreased. During Week 14, the numbers of positive specimens for influenza A (34.1%) was lower than influenza B (65.9%).

Note: ILI (Influenza-Like Illness) visit means that the patient reported fever with cough or sore throat, or used the word "flu" or "influenza" to describe either their symptoms or their reason for the ED (Emergency Department) visit.
