Marion County ED visits for Influenza-like Illness are at usual levels (low) (Oct.10 – Oct. 16)

- Emergency Department (ED) visits with Influenza-like Illness (ILI) symptoms, for all ages, are low, as is usual this time of year.
- During Week 41 (Oct. 10 to 16), **1.56% of Marion County ED visits had ILI symptoms**. The median of that for week 41 in the last 5 years has been 1.2%.
- In Marion County hospitals' ED population, **ILI was most common in the 0 – 4 age group** (9.32%). It is higher than usual. The median of that for week 41 in the last 5 years has been 5.3%.
- ED visits for respiratory syncytial virus (RSV) and other respiratory illnesses for 0-4 years old have been increasing since mid-April, and this is contributing to the increase in ILI.
 - RSV is a common respiratory virus that is the most common cause of bronchiolitis and pneumonia for children under 1 year of age in the U.S

Note: ILI (Influenza-Like Illness) visit means that the patient reported fever with cough or sore throat or used the word "flu" or "influenza" to describe either their symptoms or their reason for the ED (Emergency Department) visit.
